Helping Communities, Improving Lives

IRN Surplus Asset Reuse Program, 2015

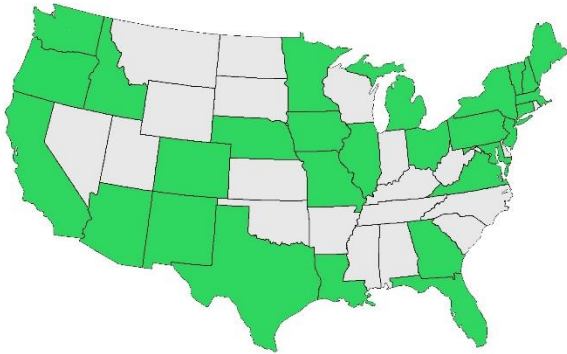

IRN has a simple mission: Keep usable furnishings out of American landfills, by matching them with communities where they are desperately needed, in the U.S. and around the world.

In 2015, IRN placed nearly 6,500,000 pounds of furnishings for reuse, and recycled 900,000 pounds of material unsuitable for reuse.

IRN worked with a network of more than 100 charitable organizations, providing usable furnishings to needy families and communities in 29 countries and 26 U.S. states.

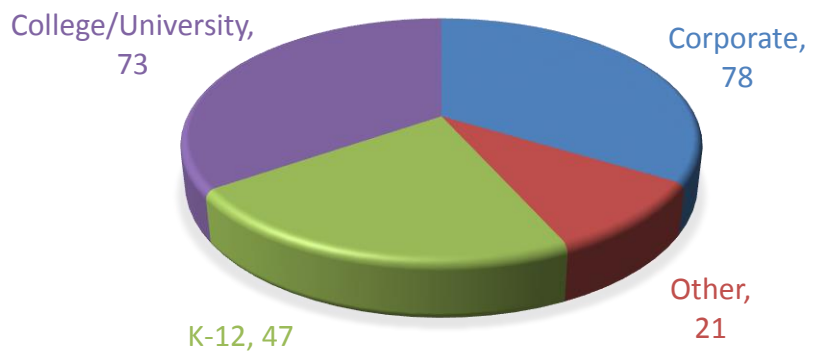

Who We Work With

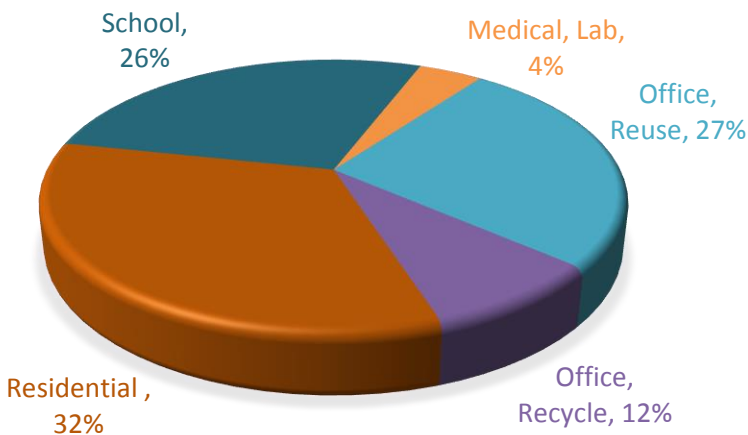

IRN works nationwide. In 2015 we completed projects in 29 states. Reflecting U.S. population, the majority of our projects are on the East and West Coasts.

In 2015 IRN worked with about 100 different organizations. Of these, 35% were colleges and universities, 25% were independent and public K-12 schools, 27% were corporate clients, and 12% were from government and healthcare.

IRN handled 219 projects in 2015. Most of our school and college projects are singletons, that is, one or just a few projects per client. Corporate clients frequently ask IRN to handle materials from many different projects in as many as ten or a dozen different states.

What We Work With

School, healthcare, and residential furnishings are always in highest demand among our nonprofit partners. About 62% of the materials we handled in 2015 fall in these categories. Office furnishings for reuse comprised about 27% of our total, and office surplus recycled for metal value was about 12%.

More than 99.5% of everything we handle can be reused or recycled. Less than 0.5% is ultimately discarded.

If You Have Surplus . . .

. . . We want to hear from you. IRN is, by far, the most experienced manager of surplus furnishings for reuse in the United States. In 95% of projects reuse costs less, often much less, than throwing surplus away. Environmentally, socially, and financially, reuse is the right thing to do.
